

Our service offer involves design and deployment, construction, technical realisation, service and maintenance. Typically for our work is, that we venture to reach new shores based on our possibilities. This shows as indicators, progressive engineering, innovative design and in the future becoming more important multifunctional construction of our vessels just as the development of our enterprise.

In the beginning of 2007, four independent companies emerged from the different business units: The Bodan-Werft Metallbau GmbH & Co. KG (limited partnership with a limited company as sole general partner) for the ship and metal building section, the Bodan Schwimmbadbau GmbH & Co. KG for the construction of stainless steel swimming pools, the Bodan-Werft Freizeit und Hafen GmbH & Co. KG for the leisure and free time branch and the Maritime Engineering and Consulting GmbH & Co. KG for the planning and construction.

The quality of our products has a seal. The Bodan Group is DIN EN ISO 9001/2000 certified and our products show not least the proof of our quality: Built in 1925, the MS "Konstanz" for example, which was made of steel, had passed through over 80 years of contemporary history and is a piece of the chronicle of the Lake of Constance. It is still operating between the Untersee and the Rhine. Durability is worth while for our customers due to our product quality and is also achieved by good upkeep: Naturally, the Bodan Group takes over the maintenance and the repair of ships and assets.

Our element is water, our material metal
